the 'first class
lounge' experience
antonia

the Antonia rug is made in
a factory powered only by
wind turbines

softening spaces...

Inspired by the famous shape of the Roman amphitheatre, the awesome structures created circa 2000 years ago by ancient artificers have endured the test of time. Whilst it may be fairly easy to get your hands on pods and commercial looking zones, Antonia offers that something extra to create an efficient, elegant area for collaboration and focus working, on a small footprint that is easy to fit into any space. Sustainability is really important to us and the Antonia showcases the kind of innovation that we think encapsulates the essence of our sustainable values.

a note from our designer_

Bringing this together with the studio, I was inspired to create an efficient, elegant area for collaboration and focus working, on a small footprint that was easy to fit into any space.

It was about removing hierarchy, including everyone, and making the "first class lounge" experience widely accessible.

guy

treading lightly

Sustainability is really important to us, and you'll see that in our Antonia room kits. From the sheer curtain fabrics made from recycled plastic to the 60% recycled plastic in the acoustic ceiling rafts. And of course, not forgetting the Nylon rugs made in a factory powered by wind turbines! This is the kind of innovation that we think encapsulates the essence of Roman architecture.

antonia_

pre-designed meeting zone

Antonia is a beautifully put together complete solution; a small room with a suspended acoustic raft ceiling, curtain walls, lighting and special zoned flooring.

Antonia is flexible and design led, lending itself to use space efficiently and make the workspace feel soft, executive and luxurious whilst remaining spacious and homely.
